MRC Appointed Exclusive Distributor for JTT Scenery Products.

Model Rectifier Corporation (MRC), of Edison, NJ has been named the exclusive distributor and marketing agent for the US and Mexico for JTT Scenery Products, Garden Grove, CA. JTT is one of the world's leading makers of handmade miniature trees and landscaping materials for model railroad layouts, model dioramas, and craft projects.

The broadest selection of miniature trees in the industry... JTT offers hobbyists the largest variety of tree species and sizes on the market. Depending on the species and the series, these remarkably realistic trees are available in a range from 1" to 18" tall, from Z through G scales. In addition to hobbyists, craft modelers and architects, moviemakers, including the professionals at Walt Disney Studios, have turned to JTT for the singular realism of their detailed, miniature scenery. The JTT lineup embraces trees as well as ground covers... grass mats, gravel and rocks for ballast and landscaping, turf coverings, chopped leaves, foliage clusters, field grass and more.

The making of a better tree... Akiko Kimura, Vice president of MRC said that "the authenticity of JTT trees offers modelers an alternative to conventional scale miniatures. What sets JTT trees apart are the details. JTT's foliage is light and airy and not clumped together as on ordinary scale trees, our leaves are more defined." She went on to point out that "in addition to realism and detail, modelers look for selection as a key purchasing factor. The more choices hobbyists have, the greater their chance of finding the tree that best complements their specific layout. And no one offers more species or sizes than JTT."

Patented process, handmade detailing... scale trees, which make up the largest part of the line, are available in three series: Professional Series; Premium Series; and Super Scenic Series. The manufacturing process, which helps to create the tree's detail is patented. Each tree is hand crafted and each series offers a choice of assembled, ready-to-plant trees, as well as kits for hobbyists who want to create their own trees.

More than 100 individual wires for accuracy... JTT's Professional Series is made for exacting modelers and professional designers. It features coated, bendable wire armatures and super fine foliage for maximum reality. Depending on the species and size of the tree, JTT often uses more than 100 individual wires. This attention to aesthetics results in a more defined branch structure and fuller, bolder, rounder foliage without bunching. Most Professional trees are available in Z to G scales from 0.5" to 16" high. The series also offers kits that allow modelers to assemble their own trees.

Excellent quality, moderate price... the Premium Series features coated metal armatures and highly defined foliage. Eight, ready-to plant species depict Autumn colors, as well as light and dark green. No assembly required. Ms. Kimura claims "these are so real you'll want to place them at the forefront of your forested areas. And if you're into creating genuine-looking dioramas yourself, the Premium Series' tree kits are ideal."

Cut down your own trees... the Super Scenic Series is economical and provides already-assembled evergreens as well as deciduous tree species. These ready-to-plant trees are produced with a unique, 3D, plastic molding technique resulting in branches that reach out in four directions. There are also kits in this series. They come with 6" or 8", bendable plastic armatures designed to fit all scales. Each branch can be cut down to create smaller size trees.

JTT Scenery Products are available at hobby shops throughout the country. Additional information will be available by visiting MRC at www.modelrectifier.com.

For more than six decades Model Rectifier Corporation of Edison, New Jersey has built a bold and dynamic reputation for quality products and technical achievement within the hobby industry.
